1,

when plac 在 List By head By, ppre 此時指向NULL, 女的此一来 会便幸礼行 ppre = ppre > link By, NULL 沒有 link 而言襄程式 chash [[ [ ] ] ] 以成: ppre = plac; plac = plac > link; #

3,

pre -> link = p cur -> link;

delete p cur;

pcur = p Pre -> link;

pPre -> link = pNew;

pNew -> link = pCur;

pCnr = pNew;

Yes, in when dummy node to在 list by head By, pCnr 不會指向 head to Lt一本不言扁星在 delete or add By, 皆不用考慮原集 pCnr 并更) head By by corner case, in 可以 simplify.
